QuarkCopyDesk is the only application of its kind, offering top-of-the-line typographical control throughout the editorial production process. Editors and writers can perform their work knowing precisely how their textual modifications fit within an article's established layout. The magazine world has traditionally placed writers, editors, and researchers in separate roles. In the editorial and publishing industry, where content and output are becoming increasingly intertwined, those same roles are merging to form a single communications manager, one with the ability to serve multiple functions and effectively manage all editorial production. QuarkCopyDesk has been designed with this new role in mind. By placing users at the center of their production process, it provides a comprehensive solution for content producers to manage, edit, design, and output text for their clients. QuarkCopyDesk includes three views that facilitate communication and editing: WYSIWYG, WYSIWYM, and Full Screen. The WYSIWYG view enables writers, editors, and researchers to view and edit their text in a browser-like environment without having to learn QuarkXPress. The WYSIWYM view provides a traditional "look-and-feel" of QuarkXPress with transparent text boxes, automatic line and column breaks, and a full-page, 3-column layout. The Full Screen view enables writers to create and edit documents and select parts of the layout. Each view is configured to the user's own preferences. Writers can work in one view or the other. Editors can perform their work in the WYSIWYG view. Readers can access all of QuarkCopyDesk's features from within QuarkXPress or in Microsoft Word. QuarkCopyDesk integrates seamlessly with other Quark components. You can choose to import and export text to a Quark component, import a Quark component into QuarkCopyDesk, or export text from QuarkCopyDesk and use it in a Quark component. Using QuarkCopyDesk, you can work in any QuarkXPress component (not just QuarkXPress itself). You can make subtle changes to a layout, make a series of edits, and finally output the component to a file in just one click. You can export all of the components you create in QuarkCopyDesk to text files or Word or WordPerfect documents. QuarkCopyDesk is the only application that offers the ability to import and export text from both Microsoft Word and WordPerfect. It's a simple way
